Official Answer Keys

VOS Web V2 — Operations Officer & Operations Manager Assessments

⚠️ RESTRICTED DOCUMENT

This answer key is for assessors and training officers only. Do NOT distribute to trainees before or during the assessment. Store securely after use.

Answer Key — Operations Officer Assessment (SCM · CRM · ARF)

PART 1 — SECTION A: SCM MULTIPLE CHOICE

Q1 **B** Assign items to warehouse bin via Put-Away — the immediate step after receiving goods.

Q2 **B** Track the complete journey of an item from supplier to end delivery.

Q3 **C** Transfers — the dedicated module for moving stock between warehouses or locations.

Q4 **C** Returned items are restocked back into the warehouse inventory.

Q5 **C** Stock levels, pending orders, and operational alerts in real time.

Q6 **B** Outbound / Order Fulfillment & Distribution — fulfillment backbone for CRM sales orders.

PART 1 — SECTION B: CRM MULTIPLE CHOICE

Q7 **A** Registered and approved in Customer Management before a sales order can be created.

Q8 **C** Sales Order Tracing — tracks real-time status of an order after approval.

Q9 **B** A Callsheet records a salesman's visit and customer interaction details.

Q10 **B** Initiate an Invoice Cancellation request and route it through the approval workflow.

Q11 **B** Manage sales transactions conducted at physical site locations or branches.

Q12 **B** New customer registrations are reviewed and approved before being activated.

PART 1 — SECTION C: ARF TRUE OR FALSE

Q13 **TRUE** Audit Trail covers all subsystem changes including SCM and CRM.

Q14 **FALSE** Post-Delivery Audit is performed *after* the delivery is dispatched and received.

Q15 **TRUE** Remittance Audit reconciles customer payments against CRM invoices.

Q16 **TRUE** Document Adherence verifies that required supporting documents are complete.

Q17 **FALSE** Operations Officers with ARF access can also view the Audit Trail.

Q18 **TRUE** Traceability & Compliance can confirm supplier origin and delivery destination of a batch.

Q19 **TRUE** Short deliveries must be documented in ARF and escalated appropriately.

Q20 **FALSE** ARF Inventory Management is audit-focused (reviewing discrepancies), not transactional like SCM's.

Q21 **TRUE** ARF findings can reference records from both SCM deliveries and CRM invoices.

Q22 **TRUE** Audit Trail supports filtering by date range, user, and subsystem module.

Q23 **TRUE** Asset Management in ARF tracks fixed company assets against audit checklists.

Q24 **FALSE** ~~All~~ remittance discrepancies — regardless of amount — must be documented and reported.

PART 2 — SHORT ANSWER: MODEL ANSWERS

Accept any reasonable answer that demonstrates understanding of the concept. Use the model below as a guide. Award partial marks (1–3) for incomplete but correct responses.

Q25 — Cross-Module Workflow (4 pts)

"Describe the complete workflow from creating a sales order to completing a post-delivery audit."

Model Answer:

- **CRM:** Register and activate the customer in Customer Management
- **CRM:** Create a Sales Order with the correct products and quantities; submit for approval
- **CRM:** Generate the Invoice from the approved sales order
- **SCM:** Create and process the Outbound Order — pick, pack, and dispatch
- **SCM:** Assign vehicle and driver in Fleet Management; log departure
- **ARF:** Conduct a Post-Delivery Audit to verify quantities received by customer
- **ARF:** Verify the Remittance against the CRM invoice upon customer payment

Award 1 pt per correctly sequenced step covering all 3 subsystems. Max 4 pts.

Q26 — CRM Invoice Discrepancy (4 pts)

"A customer claims they were invoiced for an incorrect amount. Walk through your resolution steps."

Model Answer:

- Navigate to CRM → Invoice Management and locate the customer's invoice
- Compare the invoice amount against the original approved Sales Order
- If an error is confirmed, initiate an Invoice Cancellation request
- Route the cancellation through the Invoice Cancellation Approval workflow
- Once approved, generate a corrected invoice from the sales order
- (Optional) Check the Audit Trail in ARF to see who created or modified the original invoice

Award 1 pt each for: locating the invoice, comparing to sales order, initiating cancellation, and re-issuing. Max 4 pts.

Q27 — Short Delivery Resolution (4 pts)

"A salesman reports a customer only received 15 out of 20 ordered. What actions in SCM and ARF?"

Model Answer:

- **SCM:** Check the Outbound order record to verify the dispatched quantity (was 20 dispatched?)
- **SCM:** If 5 units are still on hand, verify the inventory level and document the discrepancy
- **SCM:** Arrange a follow-up delivery for the 5 outstanding units via Outbound
- **ARF:** Log a Post-Delivery Audit finding — record "5 units short" against the delivery
- **ARF:** Check Document Adherence to confirm delivery receipt is attached
- Escalate the finding to the Operations Manager for review

Award 1 pt each for: SCM investigation, SCM follow-up dispatch, ARF post-delivery audit, and ARF escalation. Max 4 pts.

Q28 — Remittance vs Post-Delivery Audit (4 pts)

"Explain the difference between a Remittance Audit and a Post-Delivery Audit. When is each done?"

Model Answer:

- **Post-Delivery Audit** — Verifies that the *physical goods* delivered match what was ordered. Performed after the customer has received the delivery. Checks quantity and condition of goods.
- **Remittance Audit** — Verifies that *customer payments (remittances)* match the issued invoices. Performed after the customer submits payment. Checks financial records, not physical goods.
- Post-Delivery = physical verification; Remittance = financial verification.

Award 2 pts for correctly explaining each audit type with its timing. Max 4 pts.

Q29 — Pre-Order Verification (4 pts)

"Before creating a large sales order for a new customer, what should an Operations Officer verify in CRM and SCM?"

Model Answer:

- **CRM:** Verify the customer is registered, approved, and active in Customer Management — prevents order creation for unregistered clients
- **CRM:** Check the customer's classification and group — ensures correct pricing tiers apply
- **SCM:** Check Inventory Report / Inventories to confirm sufficient stock is available for the order — prevents accepting orders that cannot be fulfilled
- **SCM:** Verify warehouse location and product availability across locations if stock is spread across multiple warehouses

Award 1 pt per valid verification step with a reasonable explanation. Max 4 pts.

PART 3 — PRACTICAL ASSESSMENT: SCORING GUIDANCE

✦ ASSESSOR NOTE

The practical assessment is performance-based. Use the criteria checklist in the assessment sheet. Below are key expected outcomes per task to guide your scoring.

Task	Key Expected Outcomes	Max
Task 1 SCM Receiving	Correctly fills supplier, items, qty. Assigns to correct bin. Inventory level reflects the receipt. No errors during save.	8 pts
Task 2 CRM Customer + Sales Order	All required customer fields completed. Customer assigned to group/classification. Sales order has correct products and qty. Submitted for approval. Able to trace order status.	12 pts

Task	Key Expected Outcomes	Max
Task 3 SCM Outbound	Outbound linked to approved order. Stock availability confirmed. Pick-pack-ship completed in sequence. Vehicle/driver assigned. Order marked dispatched.	10 pts
Task 4 CRM Invoicing	Invoice generated from approved order (not manually). Cancellation request correctly routed. Invoice Summary Report covers correct period and exported.	8 pts
Task 5 ARF Audit	Post-delivery audit opened for a real delivery. Discrepancy recorded with correct quantity shortfall. Remittance matched to corresponding CRM invoice. Audit trail filtered correctly and finding explained clearly.	12 pts

Answer Key — Operations Manager Assessment (All Modules)

PART 1 — SECTION A: MULTIPLE CHOICE (10 QUESTIONS)

Q1 **B** Chart of Accounts maintains a categorized hierarchy of all financial accounts used for transactions.

Q2 **C** Put-Away is performed immediately after goods are received from a supplier.

Q3 **D** Both B (ARF Audit Trail) and C (System Management Log Activity) serve this purpose.

Q4 **C** The user's account has not been granted access to the SCM subsystem (role-based access).

Q5 **B** Approval Settings configures multi-level authorization workflows for transactions.

Q6 **B** After a payroll run, you approve the payroll and generate payslips.

Q7 **C** BIA allows creating custom Dynamic Reports across multiple subsystems.

Q8 **B** Least privilege = assigning only the minimum permissions needed for the user's role.

Q9 **C** Traceability & Compliance tracks items from source supplier to final delivery.

Q10 **C** Treasury manages cash positions, bank accounts, and fund management.

PART 1 — SECTION B: TRUE OR FALSE

Q11 **TRUE** Main Dashboard is accessible to all authenticated users; no specific

Q12 **FALSE** ADMIN users have a silent bypass — they can access all subsystems

subsystem access is required.

without explicit grants.

Q13 **TRUE** Post-Delivery Audit verifies delivered goods against the original order.

Q14 **FALSE** Transfers can be done between different warehouses, not just bins within the same warehouse.

Q15 **TRUE** File Management is available within SCM, FM, and HRM subsystems.

Q16 **TRUE** Journal entries post to the general ledger which reflects in financial statements.

Q17 **FALSE** SA Dynamic Reports can be fully customized with filters, fields, and date ranges.

Q18 **TRUE** EOS Web V2 middleware attempts token refresh before redirecting to login on session expiry.

Q19 **TRUE** Remittance Audit in ARF is used to reconcile and verify payment records.

Q20 **TRUE** Operations Manager can deactivate user accounts via System Management → Account Management.

PART 1 — SECTION C: MATCHING TYPE

1 **D** Payee Registration → D: Registering vendors and payees in the financial system

2 **E** Workforce → E: Department structure, headcount, and org chart management

3 **A** Monitoring (SCM) → A: Real-time dashboards for stock levels and order status alerts

4 **C** Document Adherence → C: Checking that required documents are complete and compliant

5 **B** Price Control → B: Managing product pricing rules and price lists in FM

PART 2 — SHORT ANSWER: MODEL ANSWERS (MANAGER)

Q21 — Purchase-to-Payment Workflow (4 pts)

"Describe the Purchase-to-Payment workflow, listing at least 4 steps and their subsystem."

Model Answer:

- **SCM:** Register/verify supplier in Supplier Management
- **SCM:** Create a purchase order linked to the supplier
- **SCM:** Receive goods via Receiving & Put-Away; update inventory
- **FM:** Post the supplier invoice in Accounts Payable / Payee Registration
- **FM:** Route the invoice through the approval workflow
- **FM:** Process payment via Treasury

Award 1 pt per correctly identified step with subsystem. Minimum 4 steps required for full marks.

Q22 — Service Down Scenario (4 pts)

"What happens when a critical backend service goes down while navigating a protected route?"

Model Answer:

- The middleware detects the failure when it cannot reach Directus or Spring Boot
- The user is redirected to the /error/service-down page with the service name displayed
- The Operations Manager should immediately notify the System Administrator
- Do not attempt to bypass or repeat login — the issue is infrastructure-level
- If using stale cache, some protected routes may still be accessible temporarily

Award 1 pt each for: what happens on screen, what the system does internally, the correct escalation, and the correct action to take. Max 4 pts.

Q23 — Subsystem vs Module Access (4 pts)

"Explain the difference between subsystem-level access and module-level access. Give one example of each."

Model Answer:

- **Subsystem-level access** grants a user entry to an entire subsystem (e.g., the user can see the SCM sidebar and its dashboard). Example: Granting access to /scm allows the user to enter the Supply Chain Management area.
- **Module-level access** controls which specific modules within a subsystem a user can open. Example: Within SCM, a user may be granted access to /scm/inventory-management but not /scm/fleet-management.
- A user needs both subsystem access AND module access to reach a specific page.

Award 2 pts per correctly explained level with a valid example. Max 4 pts.

Q24 — Payroll Discrepancy (4 pts)

"An employee's payroll appears incorrect. What steps would you take in VOS to investigate?"

Model Answer:

- Navigate to HRM → Payroll and open the payroll period in question
- Review the employee's computed salary, deductions, and contributions line by line
- Cross-check against the employee's profile in Employee Admin (correct salary rate, position)
- Check the ARF Audit Trail to see if any payroll record was modified and by whom
- If an error is confirmed, void the payroll run (if not yet finalized) or request a correction
- Re-run or adjust the affected payroll period and re-approve

Award 1 pt each for: opening payroll review, comparing to employee profile, using Audit Trail, and the correction action. Max 4 pts.

Q25 — BIA Dynamic Report (4 pts)

"How would you use BIA Dynamic Reports to prepare a monthly operations summary for top management?"

Model Answer:

- Navigate to BIA → Dynamic Reports and create a new report template
- Set the date filter to the current month
- Include data from SCM: inventory levels, outbound delivery count, supplier performance
- Include data from FM: revenue, outstanding invoices, expense totals
- Include data from HRM: headcount summary, payroll cost, attendance rate (if available)
- Export as Excel for tabular data or PDF for executive presentation
- Present alongside the BIA dashboard KPIs for visual context

Award 1 pt each for: accessing dynamic reports, setting filters, combining at least 2 subsystem data sources, and exporting the result. Max 4 pts.

PART 3 — PRACTICAL ASSESSMENT: MANAGER SCORING GUIDANCE

★ ASSESSOR NOTE

Use the criteria checklist in the assessment sheet. Below are the key outcomes expected per task for accurate scoring.

Task	Key Expected Outcomes	Max
Task 1 SCM Supplier & Product	Supplier registered with all required fields. Product added to Item Master with correct unit/category. Supplier-product link confirmed.	15%

Task	Key Expected Outcomes	Max
Task 2 SCM Inbound & Inventory	Receiving record created. Items assigned to correct bin. Inventory level reflects the receipt. Trainee can explain the impact on stock.	15%
Task 3 FM Journal + Statement	Journal entry has correct debit/credit pair. Posted successfully. Income Statement generated for correct period. Exported as PDF. Trainee can read and explain the statement figures.	20%
Task 4 HRM Employee + Payroll	Employee added with all required fields. Department assignment correct. System user linked. Payroll period initiated and approved. Payslip PDF generated and downloaded.	20%
Task 5 BIA + ARF	Dynamic Report combines data from at least 2 subsystems. Exported successfully. Audit Trail filtered by date. At least one finding identified and explained coherently.	15%

 **Reminder:** Keep this answer key secured. Do not share with trainees before or during the assessment. File alongside completed assessment sheets in the employee's training record.
